

## Dolphin Implanner™

Dolphin Implanner™ is the powerful and easy-to-use software for planning implant procedures. Assist case evaluation, create individualized treatment plans, facilitate patient education, generate precise documentation and streamline communication. The Dolphin Implanner performs implant placement and related procedures using the image of a patient's radiograph. Within minutes, your patients and referring doctors can fully understand your treatment process.

## Features

- Radiograph enhancement tools
- High-quality implant image library
- Implant placement simulation
- On-screen measuring tool
- Enhance bone grafts, sinus grafts, and anatomical structures
- Image magnification
- E-mail treatment plans and images
- Create and save multiple implant treatment plan alternatives
- Detailed treatment plan reports
- Marketing-oriented, implant-specific reports
- Patient records organized by name or number
- Fully integrated with the Dolphin Imaging program

Dolphin Imaging software is designed for use by specialized dental practices for capturing, storing and presenting patient images and assisting in treatment planning and case diagnosis. Results produced by the software's diagnostic and treatment planning tools are dependent on the interpretation of trained and licensed practitioners.

### It's simple!

**Scan** or capture the patient's radiograph

**Place** simulated implants and make on-screen notes

**E-mail**, print or show to your referring doctors or patients!

**Microsoft Partner**
